

Service name:	Training program for ski instructor
Service description:	By completing the training program for ski instructors, it would represent a starting point, i.e., a minimum level of professional competence for performing the duties of a ski instructor. They primarily consist of training recreational skiers' ski techniques and introducing novice skiers to all of the rules of behavior on the ski slopes with the goal of providing a quality and safe introduction to recreational skiing. The program would allow participants to gain teacher competencies in the execution of professional tasks of training in performing elements of ski technique, whether it is the initial acquisition of basic ski skills and knowledge or formalizing them with students who already have prior practical experience (which they gained while skiing recreationally).
